

# AQUA LUNG® SEA (Survival Egress Air)

**Military & Professional**

**with PSTASS second stage and 2.5 Cubic Foot Aluminum Cylinder**

The Aqua Lung product family of Emergency Breathing Devices (EBS) have set the benchmark standard for quality, reliability, affordability, and maintainability since the first Aqua Lung EBS was approved for use by the United States Navy over 25 years ago. On a daily basis, around the world, there are thousands of Aqua Lung EBS units worn by crew and passengers flying over water in harm's way. The Offshore Oil & Gas Industry has recognized the need to add an EBS to the personal protection ensemble, and Aqua Lung has assembled the widest range of EBS products available to fit this need.

- Compressed air system designed for air crews and passengers in case of accidental aircraft ditching
- The system weighs less than 3 pounds and has a remote mouthpiece for ease of vest integration
- This unique system integrates the SEA first stage with the PSTASS (Passenger Short Term Air Supply System) remote mouthpiece with high visibility orange accents for ease of identification and deployment
- The remote mouthpiece has a double non-return valve preventing water ingress during the first inhalation
- Easy to locate and don integrated nose occlusion device to prevent water from entering the nose
- Lightweight, flexible, and robust braided hose provides for ease of deployment. Two hose length options are standard, but custom lengths are available
- Ergonomic on/off knob and an easy to read pressure indicator
- Aluminum cylinder is DOT certified and holds 2.5 cubic foot of compressed air
- SEA first stage tested to the worldwide recognized U.S. Military environmental standard MIL-STD-810G with cylinder and PSTASS remote mouthpiece CE certified
- Considered as "Category A" devices as defined by CAP 1034 issued by the UK Civil Aviation Authority

Product Code	Description
108630	SEA w/NC, ORNG w/2.5 SF, Dial, 20" Hose
108635	SEA w/NC, ORNG w/2.5 SF, Dial, 27" Hose
