

Bear Paw 4 Portable Vehicle Barrier System

FEATURES & BENEFITS

The Bear Paw Vehicle Barrier System is a portable and scalable barricade protection system that is capable of stopping wheeled vehicles in a controlled manner. The Bear Paw's formidable appearance alone is sufficient to deter most from attempting to breach it. However, should a vehicle attempt to run through the barrier, the Bear Paw's unique design rotates the steel spikes into the undercarriage of the offending vehicle, lifting it off the ground while causing severe damage and effectively eliminating forward progress.

In addition to being relatively lightweight, easily positioned and recoverable, the Bear Paw's modular design allows vertical sections to be added or removed depending on the barrier layout. Additional Bear Paw units can also be chained together in sequence to cover wider layouts. An integrated chain is included on one end of each unit. Assembly/disassembly can be handled by a single individual.

The modular design allows the Bear Paw to be easily disassembled and packed in the included hard shell wheeled case for transport or storage.

SPECIFICATIONS

Material	3/8" Hot-rolled A36 steel
Finish	Powder-coated black. Custom colors available.
Dimensions	Height: 36" x Width: 48.5" x Depth: 35.5"
Weight	Bear Paw 4: 194 lbs; With case: 258 lbs
Case	Dimensions: 45"x 45"x 8"; Case weight: 64 lbs
