

Helicopter Rotor Maintenance Stand

This heavy duty rack is designed for helicopter maintenance facilities to aid in the inspection, maintenance and repair of main and tail rotors while removed from the aircraft. Specially designed rotisserie brackets hold rotors at a convenient work height and allow them to be rotated 270° by a single individual. Protects rotors from damage caused by floors, workbenches or makeshift stands. Can be configured to accommodate rotors of most military, civilian and law enforcement helicopters.

FEATURES & BENEFITS

- Holds helicopter rotors while removed for inspection, maintenance, repair
- Rotisserie brackets allow 270° rotation by a single technician
- Prevents damage caused by floors or makeshift stands
- Positions rotors at convenient work height — relieves back and knee strain
- Slotted work surface allows blades to be maintained in a vertical position for various specialty repairs
- Can be configured to handle rotors of most military and civilian helicopters, including Chinooks.
- Heavy duty locking casters allow the stand to be moved (loaded or empty) or locked in place
- Collapses for compact storage
